Can you imagine what life would be like without the computer? How advanced do you think the world would be in computer usage if Bill Gates and Microsoft never existed. Bill Gates should be recognized at the man of the 20th century that has done so much for not only the USA but the whole world. Other companies are already benefitting from Microsoft's taking risks in the 80s and its pool of ingenuity and software dominance. Don't punish people for being successful except in the income taxes they pay. All branches of government city county state and federal have benefitted from the taxes Microsoft and its employees have paid. Don't stifle new inventions and software.
